CUES Announces Granite XP/Cityworks Software Interface

LOCATION – CUES, the leading manufacturer of pipeline inspection equipment and software, announced the release of their CUES Granite XP/Cityworks Interface. In collaboration with Azteca Systems, the interface provides the ability to create Granite XP TV inspections in a Cityworks compatible format, therefore creating a complete data collection, maintenance management solution for utilities.

The challenge facing many Cityworks users was the need for an efficient process to perform pipeline inspections in the field using TV inspection equipment to assess the condition of infrastructure assets. Because The Granite XP software system for pipeline inspection is an asset-based system, the Cityworks Interface streamlines the field inspection process with easy-to-use import and export tools to accurately transfer data to and from Cityworks. The interface creates pending Granite XP inspections, automatically generating project names and new assets complete with the necessary Cityworks FacilityID. Post inspection, the interface returns Work Orders, asset information, and Project Names, eliminating the need for manual data entry, increasing productivity and mitigating errors.

“We see this as a true benefit to Cityworks users,” said Brian Haslam, President Azteca Systems. “Our customers can now automate and schedule field inspections while ensuring consistency, data integrity, and accurate inspection data. Likewise, Granite XP users now have a truly innovative maintenance management system choice in Cityworks”

“The Granite XP/Cityworks interface further strengthens CUES position as an industry leader,” said Joe Purtell, Director of the CUES Software Division. “We continue to offer comprehensive, intuitive software solutions designed to facilitate the TV inspection/data collection process to meet or exceed EPA and GASB 34 regulatory requirements.”

About Azteca Systems

Founded in 1986, Azteca Systems, Inc. is the leading provider of GIS-based Asset Maintenance Management Systems for Public Works and Utilities. Built exclusively on

top of ESRI's leading GIS technology, Cityworks is a powerful, scalable and affordable solution for the enterprise, the department or individual.

About CUES Inc.

CUES (Community Utility Equipment Services) is the world's leading manufacturer of Closed Circuit Television Video (CCTV) inspection/rehabilitation equipment and pipeline inspection/asset management software for sanitary and storm sewers, industrial process lines, and water lines.
