### **CUES Introduces New Technology for Sanitary & Storm Sewer Inspection** - The steerable compact camera transporter (CPR - Compact Pipe Ranger)

**Orlando, FL, November 20, 2006** – CUES, the leading manufacturer of CCTV pipeline inspection equipment and asset inspection / decision support software, announces the release of the Compact Pipe Ranger. The steerable Compact Pipe Ranger camera transporter is designed to traverse up to 1200' under normal pipe conditions to inspect 6" relined pipe through 30" diameter pipe. When assembled with the CUES OZIII zoom pan and tilt camera, the compact length enables the unit to negotiate most difficult entry conditions and standard sweeps.

The superior pulling power of the CPR, combined with the OZ III optical zoom camera with built in directional lighting, creates video inspection quality that's unsurpassed in the industry. Features include multiple wheel sets to maximize bottom clearance, traction, and to optimize camera position. Ease of operation is accomplished with one joystick control for all transporter and camera movements. A variable "cruise control" setting is also available for transporter speed for hands-off operation. The transporter can operate as part of any new or existing CUES multi-conductor system. All existing CUES systems can be retrofitted to operate the transporter.

#### **About CUES**

CUES is the world's leading manufacturer of closed circuit television video (CCTV) inspection/rehabilitation equipment and pipeline inspection/asset management software for sanitary and storm sewers, industrial process lines, and water lines.
